

BOXES OF TRICKS

There's no question that JBL is one of the oldest and most respected names in the audio industry. Its wide range of products comprises all manner of speakers, including popular mobile entertainment models. Well, lovers of their GT Series subwoofer drivers – and there's lots – now have an added option for the enhancement of the auditory in-car experience. The GT5-12 300mm subwoofer is now available in its own dedicated subwoofer enclosure. There's a choice of two computer-optimised enclosures to house either one or two GT5-12s. The GT5-1204BR single subwoofer enclosure is a ported design and dips down to 45Hz with an impedance of 4 ohms and 92dB sensitivity. The GT5-2402BR double 300mm woofered dual-ported enclosure allows a deeper 40Hz point, is slightly more efficient at 95dB and will also seep more amplifier power with its 2 ohm load. The enclosures themselves are very nicely finished and include high quality, heavy duty speaker connectors. The driver cones are protected against flying car boot objects by thick and visually attractive metal bars that are a colour match to the large reflex port that incorporates JBL's Slipstream Technology. Both subwoofers can output enough levels to really shake your car booty.

The GT5-1204BR and GT5-2402 subwoofers are priced at \$279 and \$599 respectively and will be exclusively available via Strathfield stores throughout Australia.
