

GTO from JBL

JBL is poised to shake the in-car audio world with the release of the GTO range of high quality amplification. The new series will include seven models with monoblocks, two, four and five channel units ranging from an adequate 75 watts on-tap for the GTO752 to the GTO14001's massive 1,200 watts. JBL uses Class-D technology in their 425 watt and 1200 watt models and conventional Class-AB design for the lower powered amplifiers. The 5 channel and mono subwoofer power amplifiers have a Dynamic Bass Optimisation (DBO) circuit that provides a variable subsonic filter with significant bass boost and are supplied with a bass level remote control.

JBL concentrated considerable effort on the development of sophisticated circuitry and exterior design. All amplifiers in the range include high quality connectors and have a high degree of fit and finish. The low profile aluminium chassis ensures efficient cooling and a stable environment for reliable and enduring operation.

The JBL GTO Series will be available as we hit the shelves.

JBL GTO SERIES AMPLIFIERS

PRICE: FROM \$399 TO \$699
